PROFESSIONAL SUMMARY

I am a creative Frontend Developer with a background in Economics and a passion for building user-focused digital experiences. Skilled in HTML, CSS, Tailwind CSS and responsive web design, with experience transforming ideas and visual concepts into functional web interfaces.

Strong interest in combining creativity, technology and problem-solving to build meaningful digital solutions.

TECHNICAL SKILLS

Frontend Development:

HTML5

CSS3

Tailwind CSS

Responsive Web Design

Tools:

Visual Studio Code

Git & GitHub

AI-Assisted Development Tools

Design Skills:

UI Design Principles

Layout Design

Typography

Brand Consistency

PROJECT EXPERIENCE

Personal Portfolio Website

Designed and developed a personal developer portfolio to showcase technical skills, projects and development process.

Responsibilities:

Built responsive layouts using HTML and CSS

Improved user interface and visual hierarchy

Integrated downloadable resume functionality

Documented AI-assisted development workflow

Refactored original design for improved user experience
MamaPutOnline – Food Ordering Website

Created a Nigerian food ordering website prototype for users seeking convenient access to freshly prepared meals.

Responsibilities:

Designed user-friendly navigation structure
Developed food category layouts
Built reusable product card sections
Debugged styling and layout issues
ChildrenSmart – E-Commerce Website

Developed a children-focused shopping website interface.

Responsibilities:

Created product display sections
Applied visual design principles
Structured reusable frontend components
Tailwind CSS UI Replication Project

Recreated a user interface design using Tailwind CSS.

Responsibilities:

Converted visual design into code
Applied utility-first CSS styling
Practiced responsive layouts
EDUCATION

B.Sc Economics
Tansian University

Fullstack Development Program
Turing Tech LLC

SOFT SKILLS

Problem Solving
Creative Thinking
Communication
Research
Attention to Detail

Prompt 1 – Project Understanding & Planning

Prompt Used:

```text

Using multiple prompts and vibe engineering (not vibe coding), help me build a personal portfolio website.

The website should include my photo, ATS-compliant resume, projects completed during my program, prompts used, engineering improvements, comments in my code, sticky navbar and footer.

```

Engineering Work Done:

```text

I analyzed the assignment requirements and converted them into a development plan.

I chose the structure of the website, planned required sections and decided what information each section should communicate.

```

Prompt 2 – Website Structure Generation

Prompt Used:

```text

Create the HTML structure for a professional frontend developer portfolio website.

Include a hero section, navigation bar, about section, projects section, vibe engineering section, contact section and footer.

Add comments explaining different parts of the code.

```

Engineering Work Done:

```text

I reviewed the generated structure and modified it to fit my personal brand.

I reorganized sections, added meaningful comments and ensured the structure matched the assignment objectives.

```

Prompt 3 – Branding & Visual Design

Prompt Used:

```text

Review my portfolio design.

I want it to look professional but I do not want to lose creativity and luxury.

It should look like someone who loves beautiful things and is also a programmer created it.

```

Engineering Work Done:

```text

I tested different visual approaches and improved the user interface by adjusting colors, typography, spacing and layout.

I selected a luxury-inspired color palette while maintaining professional readability.

```

Prompt 4 – Typography Improvement

Prompt Used:

```text

Is this font professional enough for a developer portfolio?

Suggest typography that balances luxury, creativity and technology.

```

Engineering Work Done:

```text

I compared different font combinations and replaced the initial font choice.

I implemented Playfair Display for headings and Inter for body text to create a balance between elegance and readability.

```

Prompt 5 – Image Placement & User Experience

Prompt Used:

```text

Can I use my picture as a blurred background?

Will it look professional for a developer portfolio?

```

Engineering Work Done:

```text

I evaluated visual impact versus user experience.

I adjusted the design approach by keeping a professional hero image while ensuring visuals did not distract from portfolio content.

```

Prompt 6 – Debugging Image Display Issues

Prompt Used:

```text

My images are not showing on my website.

Help me debug why my HTML image paths are not working.

```

Engineering Work Done:

```text

I inspected the folder structure, corrected file paths and improved my understanding of how HTML links external assets.

```

Prompt 7 – CSS Layout Debugging

Prompt Used:

```text

My website layout changed after adding new styling.

Help me identify what went wrong in my CSS and fix the layout.

```

Engineering Work Done:

```text

I debugged CSS conflicts, corrected selectors, adjusted flexbox/grid layouts and improved page responsiveness.

```

Prompt 8 – Project Documentation

Prompt Used:

```text

Help me write professional project cards showing the problem, design process, development approach and final delivery.

```

Engineering Work Done:

```text

I transformed simple project descriptions into case studies explaining the purpose, process and solution behind each project.

```

Projects documented:

```text

MamaPutOnline

ChildrenSmart

Tailwind UI Replication Project

Personal Portfolio Version 2

```

Prompt 9 – Refactoring Existing Work

Prompt Used:

```text

I already have an old portfolio.

Should I start again or improve the existing version?

Help me refactor it into something better.  
```

Engineering Work Done:

```text

I chose to improve an existing project instead of rebuilding from scratch.

I retained effective design ideas, improved weaknesses and created a more polished second version.  
```

Prompt 10 – GitHub Deployment

Prompt Used:

```text

Teach me how to push my completed portfolio project to GitHub in a way I can understand.  
```

Engineering Work Done:

```text

I initialized Git, committed my project, corrected repository connection issues and deployed my project using GitHub Pages.  
```

..

This project was developed using vibe engineering.

Rather than accepting AI-generated output directly, I used AI as a collaborative tool by prompting, reviewing, testing, debugging and refining the final solution.

The final portfolio represents multiple iterations involving design decisions, code improvements and problem-solving.
```
